FWD-VM Button

Lets say some one calls you and your phone rings but you want them to go to Voicemail. All you need is to have the forward button added to your phone. To use the Forwarding Voicemail button all you need to do is hear the ringing of the phone and push the FWD-VM button, and the call will go straight to voicemail.

To have this option added to your phone email cowlesd@strose.edu

<u>WARNING</u> you will need to swap out an existing button on your phone. If you can't lose any existing buttons please feel free to email the above address for other options.
